DIPARTIMENTO DI ARCHITETTURA
E STUDI URBANI

Kick off meeting

LODE

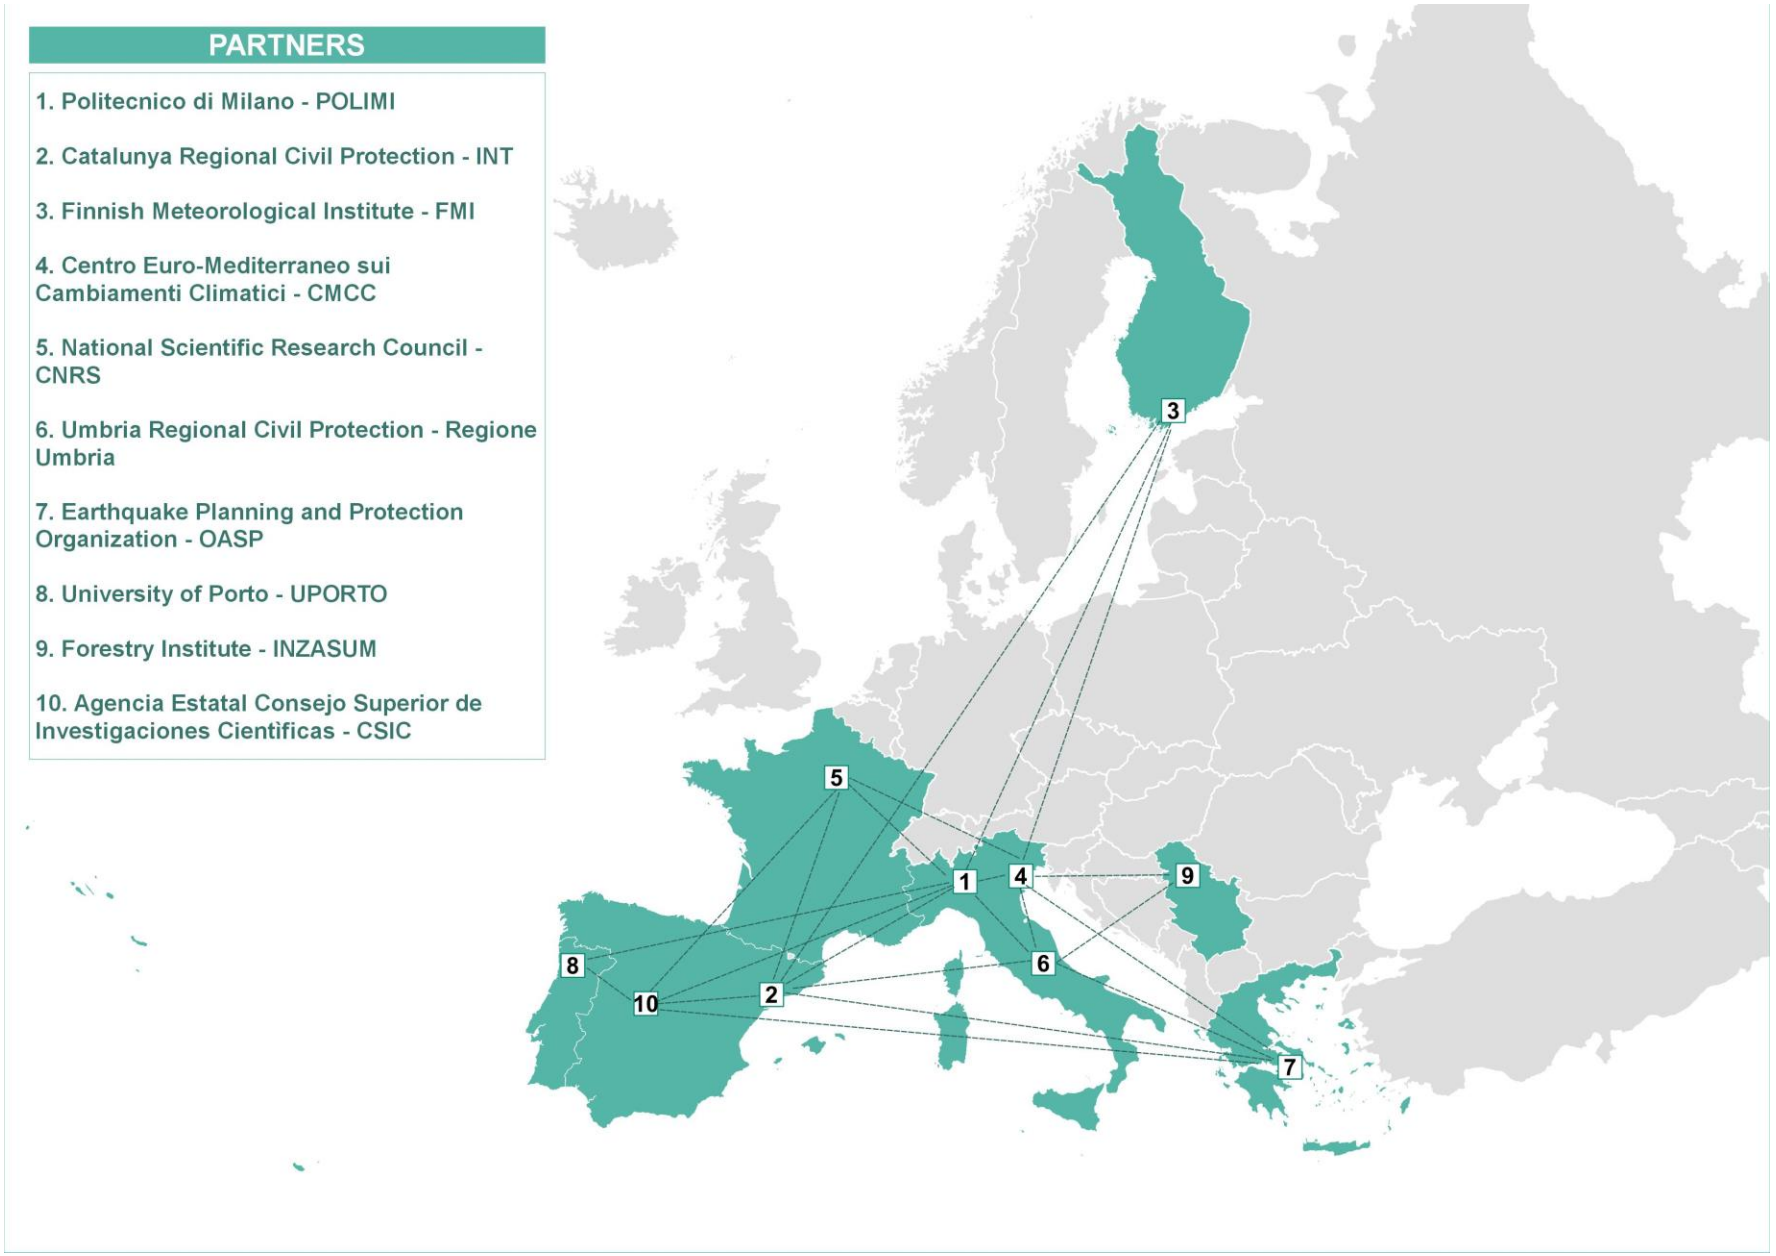
Loss Data Enhancement for DRR and CCA management

* DASTU – Politecnico di Milano, **DICA – Politecnico di Milano

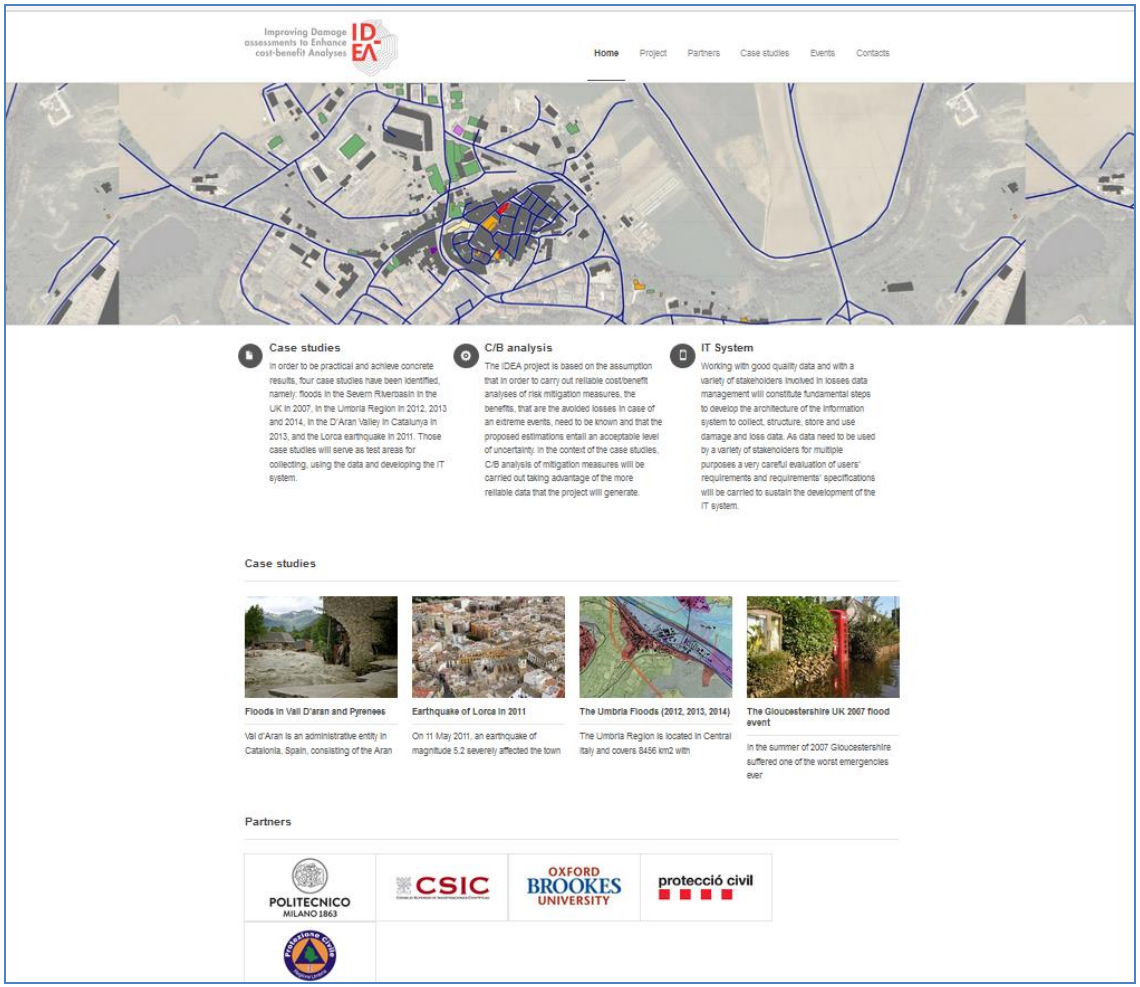
Lode's Partners and countries

PARTNERS

1. Politecnico di Milano - POLIMI
2. Catalunya Regional Civil Protection - INT
3. Finnish Meteorological Institute - FMI
4. Centro Euro-Mediterraneo sui Cambiamenti Climatici - CMCC
5. National Scientific Research Council - CNRS
6. Umbria Regional Civil Protection - Regione Umbria
7. Earthquake Planning and Protection Organization - OASP
8. University of Porto - UPORTO
9. Forestry Institute - INZASUM
10. Agencia Estatal Consejo Superior de Investigaciones Cientificas - CSIC



The seeds of Lode



The Idea project is certainly the more important antecedent of the Lode project and it provided us with important lessons on which this project should build

POLITECNICO MILANO 1863

DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

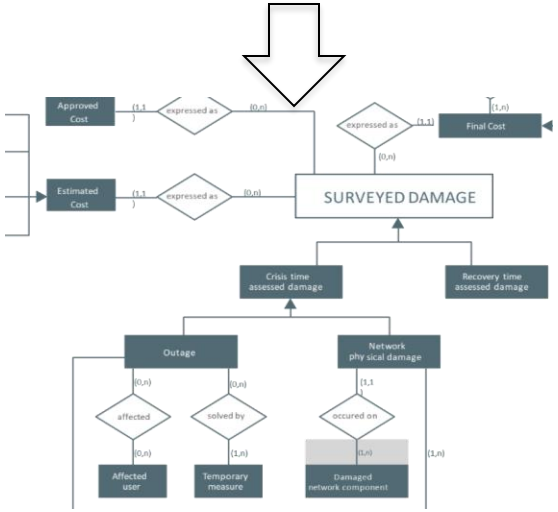
The seeds of Lode

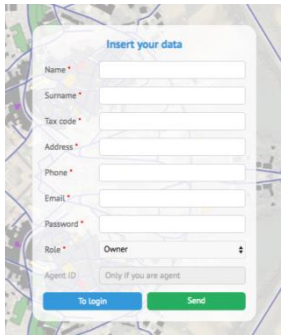
The contribution of some of us to the Technical Group on Loss Data led by the JRC is another important seed of this project. The discussions and the reports that have been produced insofar provide us with the notion of the state of art and what are the key gaps that still need to be addressed

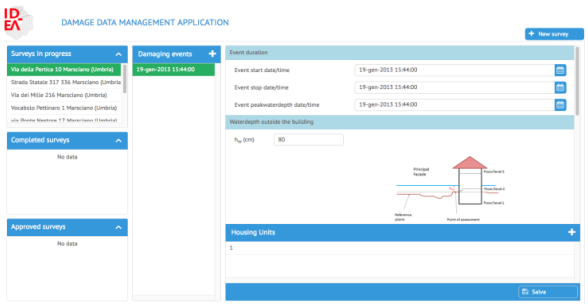
POLITECNICO MILANO 1863

DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

The seeds of Lode







Some results:

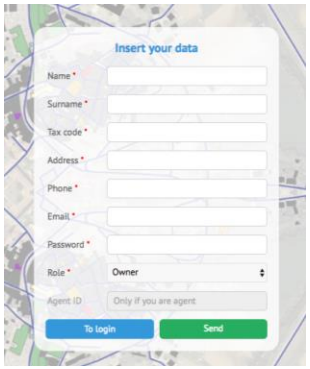
- Loss databases initiated and developed in some countries at least for some hazards

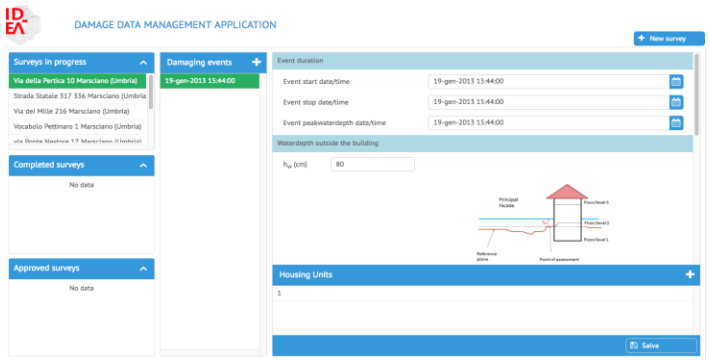
- We have developed in the context of Idea a methodological path from damage investigation → identification of key elements/factors to be collected and addressed for different uses → the development of a database (also in the context of a service carried out for the Catalunya Civil Protection)

POLITECNICO MILANO 1863

DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

The seeds of Lode





…

And we have started querying the database to use results for different types of applications.

SELECT Event_ID, Region, Assessment_ID, Asset_category, Location, Function, Damage_Description

FROM Event, Assessment_Survey, Damage_to_Tangible_Fixed_Asset

WHERE Event_ID=ERTQ20052012 **AND** Region= Emilia Romagna **AND** Damage_Description= Collapse of the Roof

Event_ID	Region	Assessment_ID	Asset_ID	Asset_category	Location	Function	Damage_description
ERTQ20052012	Emila Romagna	31052012XY	RE1960RW	Warehouse	Reggio Emila	Aging cheese warehouse	Collapse of the Roof
ERTQ20052012	Emila Romagna	31052012XZ	BO1973RW	Warehouse	Bologna	Aging cheese warehouse	Collapse of the Roof
ERTQ20052012	Emila Romagna	03062012XT	BO1990CS	Shed	Bologna	Cattle Breeding	Collapse of the Roof
ERTQ20052012		…	…	…	…	…	Collapse of the Roof

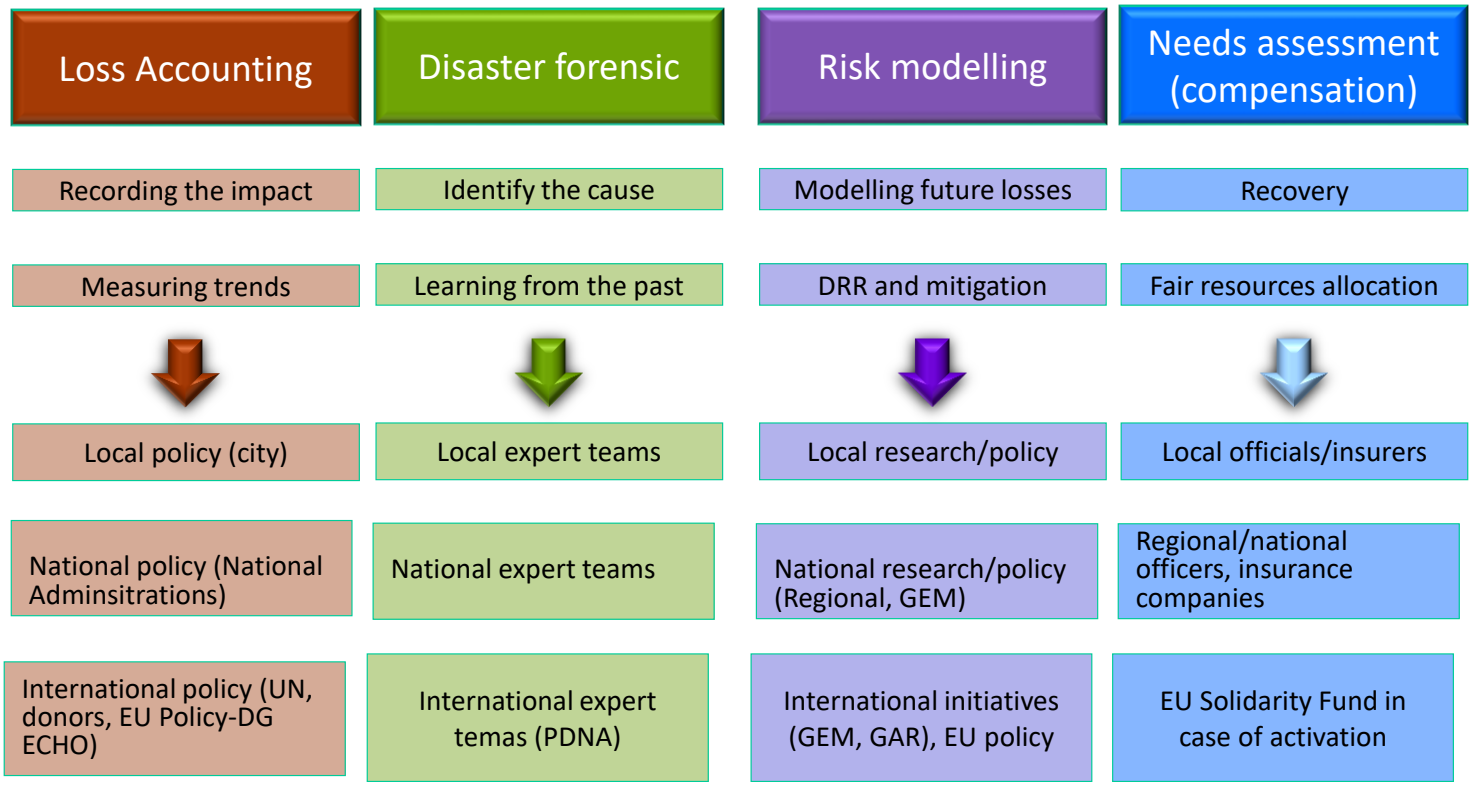
SELECT Event_ID, Assessment_ID, Asset_ID, Asset_category, Product_ID, Type, Damage_Description, %_Quality_Loss, VAT_Number

FROM Assessment_Survey, Damage_to_Tangible_Fixed_Asset, Damage_to_Transformed_Good, Damage_to_Transformed_Good_cused_by_Damage_to_Tangible_Fixed_Asset

WHERE Event_ID= ERTQ20052012 **AND** Cause_Asset_category= Warehouse **AND** Type= ParmigianoReggiano

POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

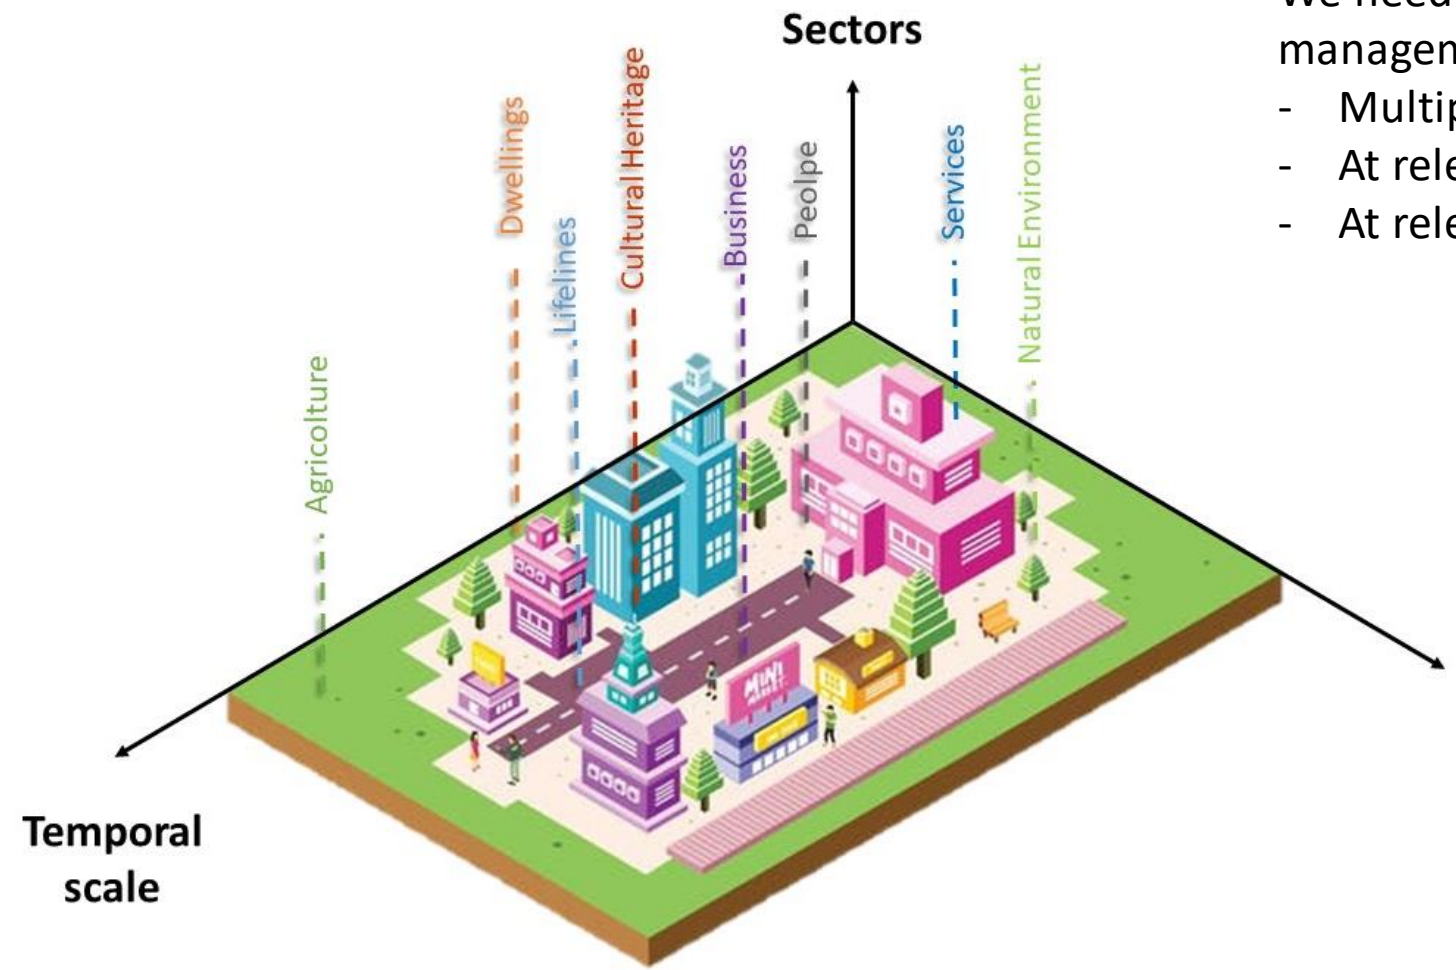
The seeds of Lode



Applications that have been indicated by the First Report of the JRC Group: De Groeve et al., 2013 and amended in different ways. This is our own version of the multipurpose model of loss and damage data

POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Seeds of Lode



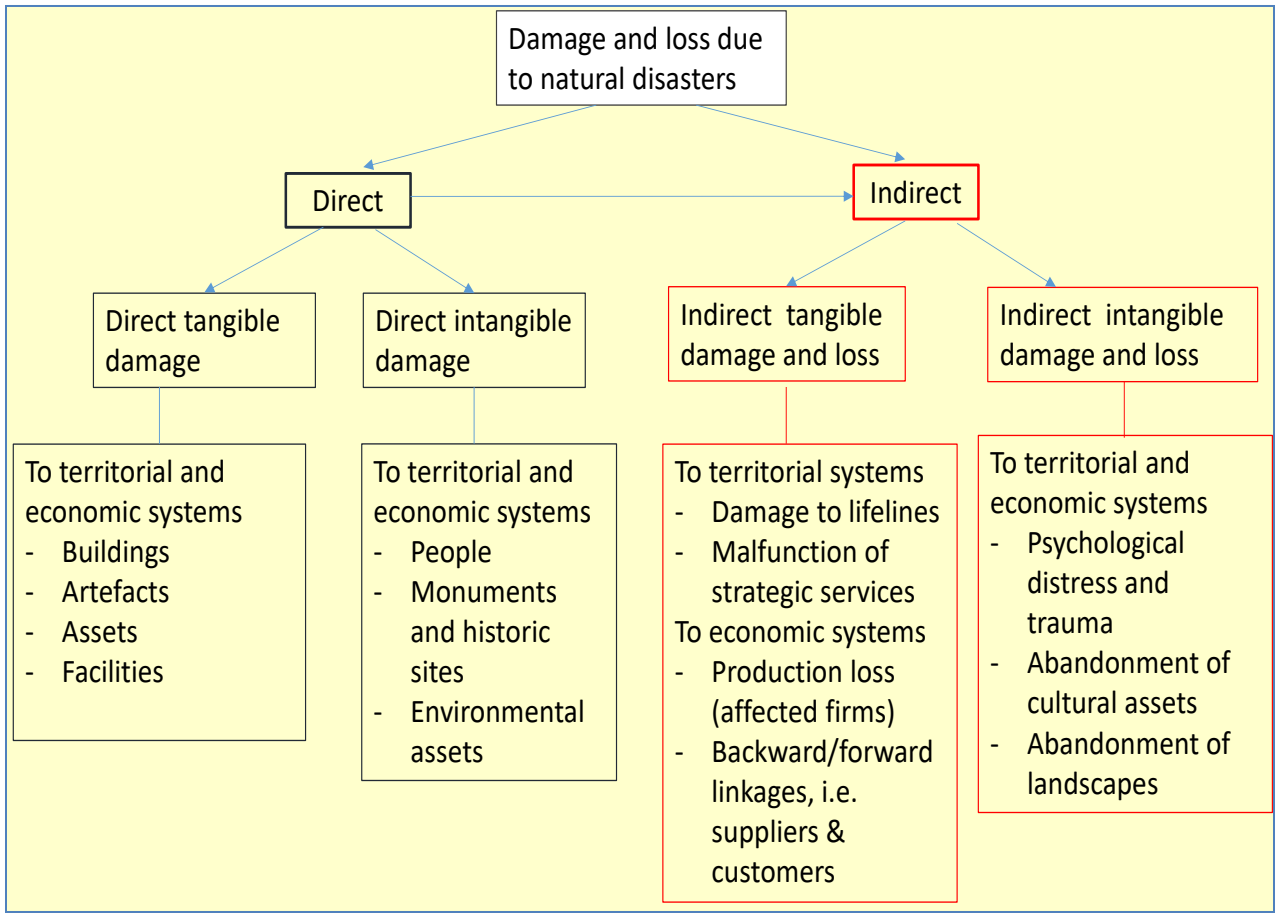
Conceptual achievements

We need a damage data management that considers:

- Multiple sectors
- At relevant spatial scales
- At relevant temporal scales

POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Seeds of Lode



Gaps

- Correspondence between physical damage description and monetary values
- Need to recour to modelling for damage that cannot be fully surveyed
- Large effort of data coordination between different sectors

POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Gaps

- Correspondence between physical damage description and monetary values
- Need to recour to modelling for damage that cannot be fully surveyed
- Large effort of data coordination between different sectors

POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Lode structure

WP1. Management and Coordination of the Action

1.1. Set up of the Steering Committee
1.2. Face to face project meetings
1.3. Online meetings
1.4. Short working week in Milan
1.5. Administrative and financial management

WP2. Creation and Management of the stakeholders' network

2.1. Creation and maintenance of the stakeholders' network
2.2. Co-producing knowledge with the stakeholders' network and identification of gaps and challenges of current loss and damage data management
2.3. Involvement of stakeholders in the showcases

WP3. Design, implementation and testing of the Information Infrastructure

3.1. Conceptualization and development of the data model
3.2 Implementation of the information system for three sectors: lifelines, economic activities and cultural heritage
3.3. Assessment of replicability and interoperability of the Information infrastructure

WP4. Showcases of damage and loss data management

4.1. Structuring the data according to the data model and incremental population of the database
4.2. Use of data for forensic investigation in selected showcases
4.3. Use of data for risk assessment models' validation and improvement in selected showcases
4.4. Use of damage and loss data for accounting in selected showcases
4.5. Use of damage and loss data to carry out C/B analyses in selected showcases

WP5. Output and Dissemination

5.1. Website development
5.2. Developing dissemination material for interested parties and stakeholders not involved in the project
5.3. Scientific dissemination
5.4. Organisation of the first project's international workshop
5.5. Organisation of the final project's workshop

POLITECNICO MILANO 1863

The core concepts of the project

Stakeholders' network

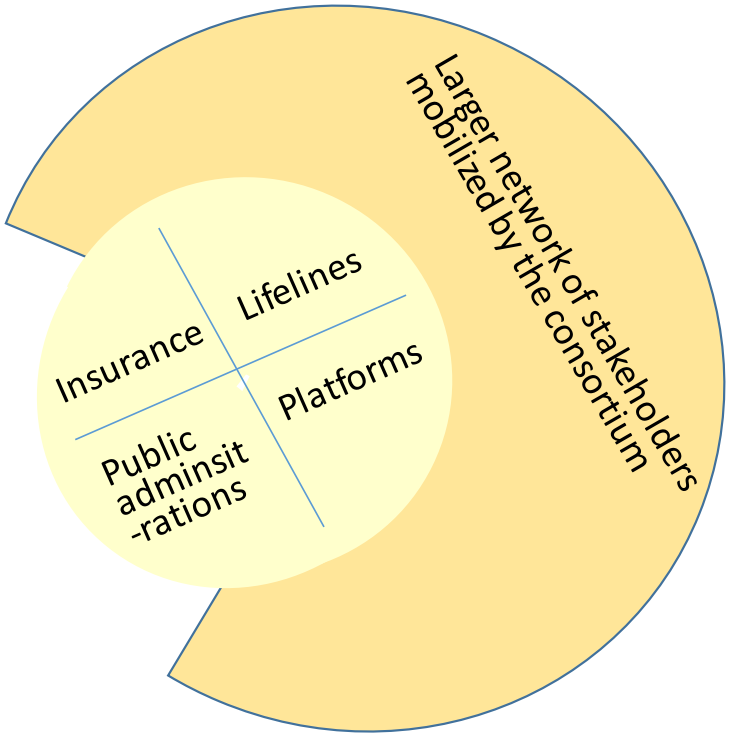
Case studies for data collection and applications

Information System: full conceptualization and implementation of a set of databases for all sectors

POLITECNICO
MILANO 1863
DIPARTIMENTO DI ARCHITETTURA
E STUDI URBANI

Stakeholders' network

Every partner has to develop, establish and maintain a network of stakeholders that are interested in the project, pertinent to the tasks and with whom we can have meetings and invite them to the two workshops of the project.
At least 5, from different levels of government, different sectors, so that at the end we cover the map of aspects, sectors, responsibilities. This has to be done in a much more coherent and systematic way than was the case with the Idea project



POLITECNICO
MILANO 1863
DIPARTIMENTO DI ARCHITETTURA
E STUDI URBANI

Case studies and applications

Every partner is responsible for the case studies indicated in the DOA. So:

- It make sense that at least one, but perhaps more than one stakeholders of the network are persons connected to the case studies.
- In this regard we need to consider again the case studies carefully, immediately verify if the stakeholders with whom we thought to work are still available.
- Otherwise we should consider alternative case studies, carefully considering the availability of data for the population of the database and the applications

ITALY	Umbria, Norcia	Earthquake	30 Oct. 2016	Local Regional	High impact for a moderate magnitude earthquake. Affected in a large region; an opportunity to collect post disaster data, investigate the damage to both single assets and systems; an opportunity to provide guidelines for reconstruction and repair according to the Sendai Indicators. The results can be applied in several medium sized cities with the same characteristics in Italy, France, and Spain.	No	Risk assessment; forensic; Lifelines and CI sector

POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Case studies and applications

ITALY	**Umbria, Norcia**	Earthquak e	30 Oct. 2016	Local Region al	High impact for a moderate magnitude earthquake. Affected in a large region; an opportunity to collect post disaster data, investigate the damage to both single assets and systems; an opportunity to provide guidelines for reconstruction and repair according to the Sendai Indicators. The results can be applied in several medium sized cities with the same characteristics in Italy, France, and Spain.	No	Risk assessment; forensic; Lifelines and CI sector
	Central Italy	Snow- storms	Janua ry 2017	Local Region al	The snowstorm in Italy occurred in the localities where the successive earthquakes occurred in summer and fall. Most of the areas that were affected by the snowstorm were already in the emergency state. They were dealing with another disaster while trying to recover from the previous one. Therefore, that provides a unique example for recovery and emergency at the same time.	No, but eminentl y on lifelines	Forensic; indirect damages; CI sector
	Northern Italy	Series of Floods, caused by intense precipitati on, levee break	2014-2016	Region al	Resulting floods have induced damages and difficulties such as cut off roads, mud deposits, vehicles destruction and fatalities. As a result of this event the Copernicus emergency services were initiated, and partially EU Solidarity Fund activated.	Partially	Risk modelling; forensic; use of high resolution exposure data, remote sensing ; agricultural sector

POLITECNICO MILANO 1863

DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Case studies and applications

Use of the case studies:

a. Using the data to **populate the database**. Structuring and managing the data is the responsibility of each partner who need to devote effort for this task

a. The case studies will be also the field for the **different types of applications** that have been foreseen:

- Accounting (responding Sendai and use for National Risk Assessment)
- Improving risk modelling: «validation» and identification of criticalities in existing models (for this we need pre-event risk assessments available or possible)
- Forensic investigation: as Forin/Perc/Accidents but also I propose forensic as such

POLITECNICO
MILANO 1863
DIPARTIMENTO DI ARCHITETTURA
E STUDI URBANI

Case studies and applications

Accounting (responding Sendai and use for National Risk Assessment)

Sendai Indicators		Vall d'Aran case	Unit measure	Umbria case (2012)	Unit measure
Target A: Substantially reduce global disaster mortality by 2030, aiming to lower average					
A-1	Number of deaths and missing persons attributed to disasters, per 100,000 population.	0		0	
	(This indicator should be computed based on indicators A-2, A-3 and population figures)				
A-2	Number of deaths attributed to disasters, per 100,000 population.				
A-3	Number of missing persons attributed to disasters, per 100,000 population.				
Target B: Substantially reduce the number of affected people globally by 2030, aiming to lower the average global figure per 100,000 between 2020-2030 compared to 2005-2015					
B-1	Number of directly affected people attributed to disasters, per 100,000 population.				
	(This indicator should be computed based on indicators B-2 to B-6 and population figures.)				
B-2	Number of injured or ill people attributed to disasters, per 100,000 population.				
B-3	Number of people whose damaged dwellings were attributed to disasters.	323*	number/time	300*	number/time
B-4	Number of people whose destroyed dwellings were attributed to disasters.				
B-5	Number of people whose livelihoods were disrupted or destroyed, attributed to disasters.				
Target C: Reduce direct disaster economic loss in relation to global gross domestic product (GDP) by 2030					
C-1	Direct economic loss due to hazardous events in relation to global gross domestic product. (This indicator should be computed based on indicators C-2 to C-6 and GDP figures).	10.273.400	Euro	12.950.000	Euro
C-2	Direct agricultural loss attributed to disasters.	10.650.000	Euro	7420400* (28 M)	Euro
C-3	Direct economic loss to all other damaged or destroyed productive assets attributed to disasters.				
C-4	Direct economic loss in the housing sector attributed to disasters.	4.200.000	Euro	2.900.000	Euro
C-5	Direct economic loss resulting from damaged or destroyed critical infrastructure attributed to disasters.	50.939.341	Euro	50.030.341	Euro
C-6	Direct economic loss to cultural heritage damaged or destroyed attributed to disasters.	0		600.000	Euro

Case studies and applications

Accounting (responding Sendai and use for National Risk Assessment)

Sendai Indicators		Vall d'Aran case	Unit measure	Umbria case (2012)	Unit measure
Target D: Substantially reduce disaster damage to critical infrastructure and disruption of basic services, among them health and educational facilities, including through developing their resilience by 2030					
D-1	Damage to critical infrastructure attributed to disasters.				
	(This index should be computed based on indicators D-2 to D-5)				
D-2	Number of destroyed or damaged health facilities attributed to disasters.	0		0	
D-3	Number of destroyed or damaged educational facilities attributed to disasters.	10	number/time	39/2days; 7/5days	number/time
D-4	Number of other destroyed or damaged critical infrastructure units and facilities attributed to disasters.				
D-5	Number of disruptions to basic services attributed to disasters.				
	(This indicator should be computed based on indicators D-6 to D-8)				
D-6	Number of disruptions to educational services attributed to disasters.				
D-7	Number of disruptions to health services attributed to disasters.				
D-8	Number of disruptions to other basic services attributed to disasters.	4000 power	outages/time	9 public facilities; 500 Power	number outages/time

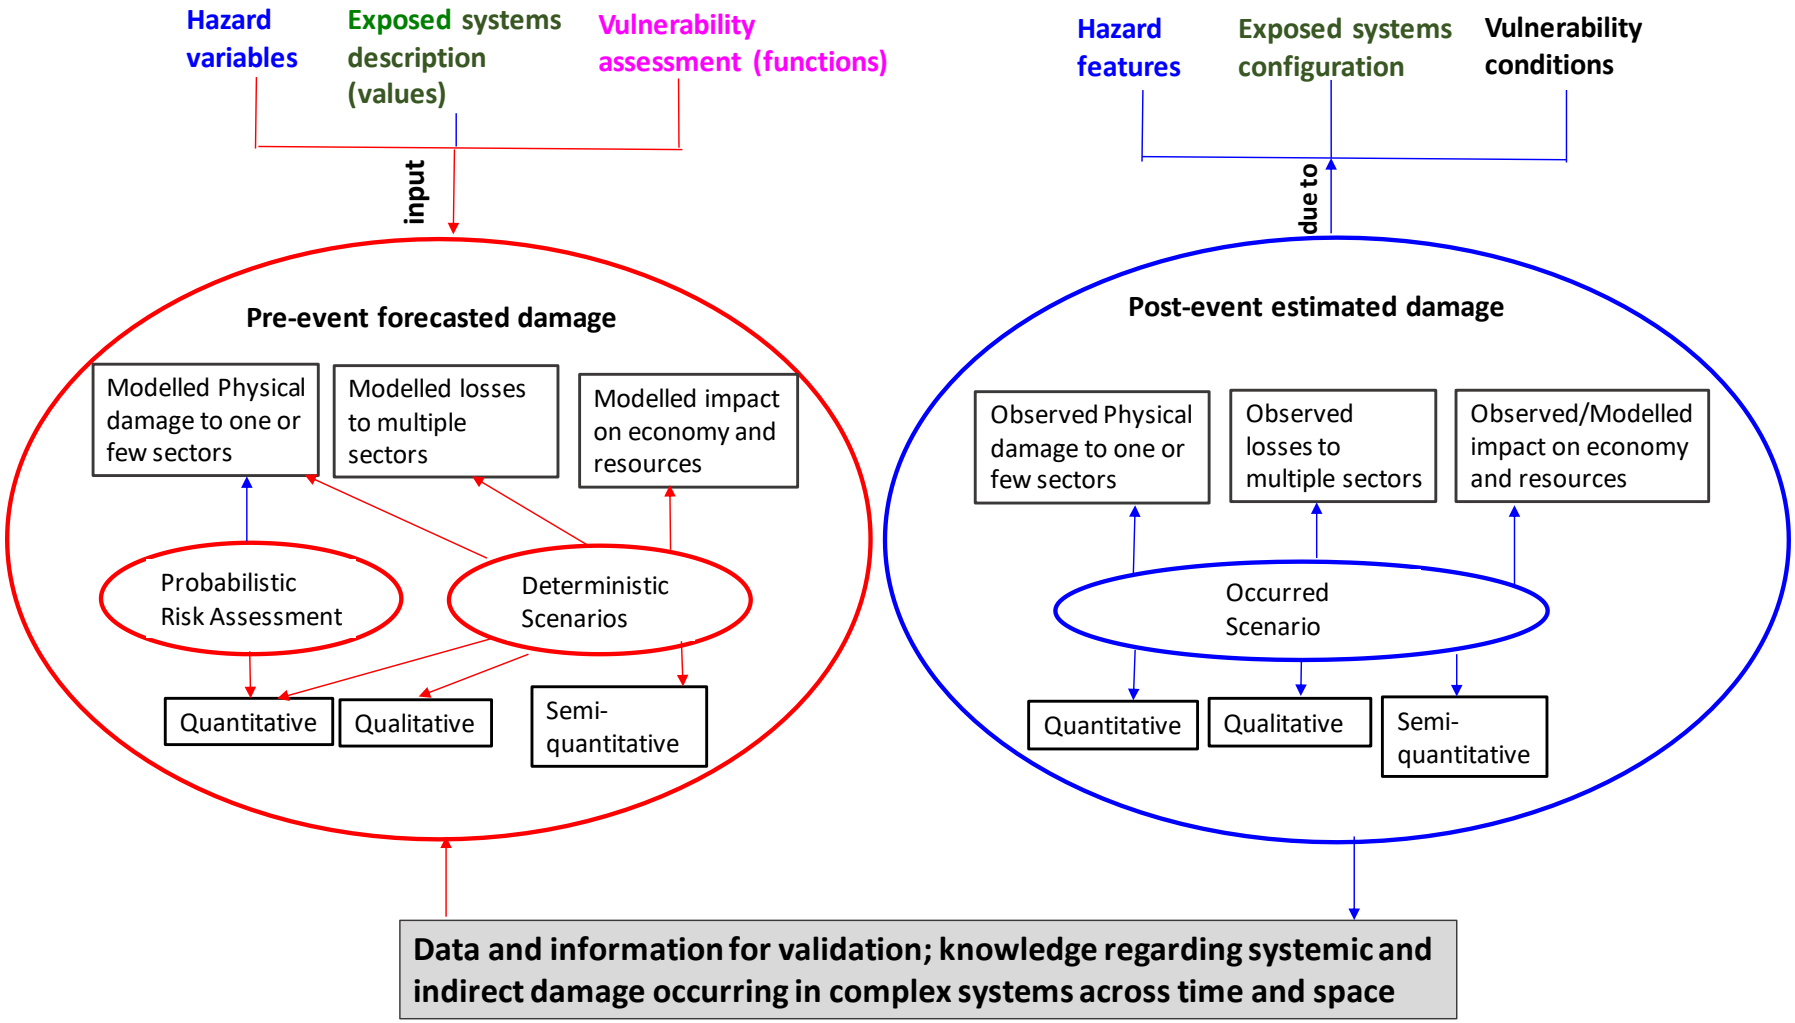
Issues encountered:

- Problem with some units of measure suggested by the Sendai indicators Group, they do not reflect the way data are actually collected and what can be achieved (also in terms of level of detail);
- There are some aspects that are not covered by the indicators and units of measure but are actually collected and then could be used for monitoring progress

POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Case studies and applications

Improving risk modelling



Case studies and applications

Improving risk modelling and developing C/B analysis using post-disaster damage data

Danni evitati con le dighe [€]			
Totale	Residenziale	Agricoltura	Industria/Comm.

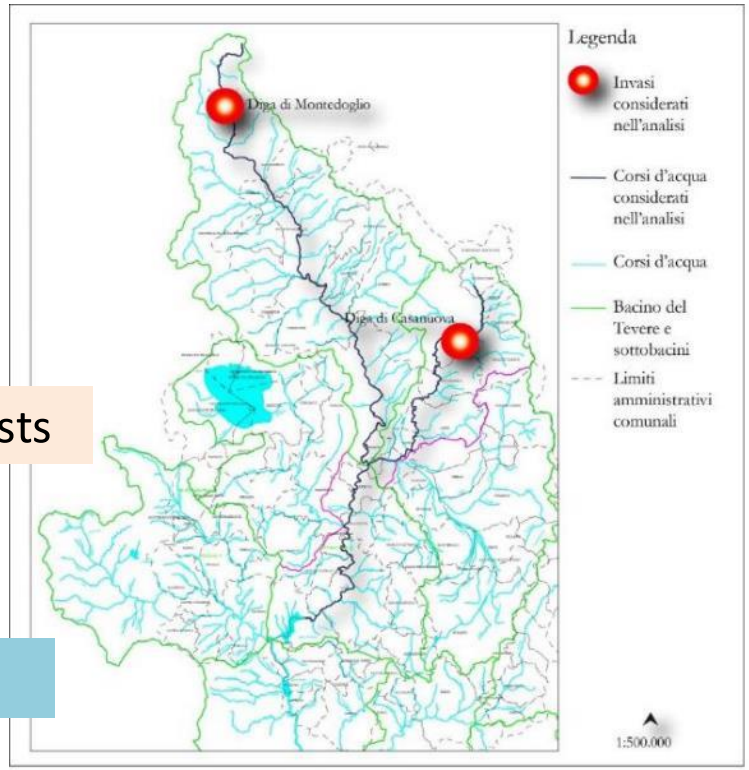
2013	10.712.108	1.314.286	9.397.822

Benefits

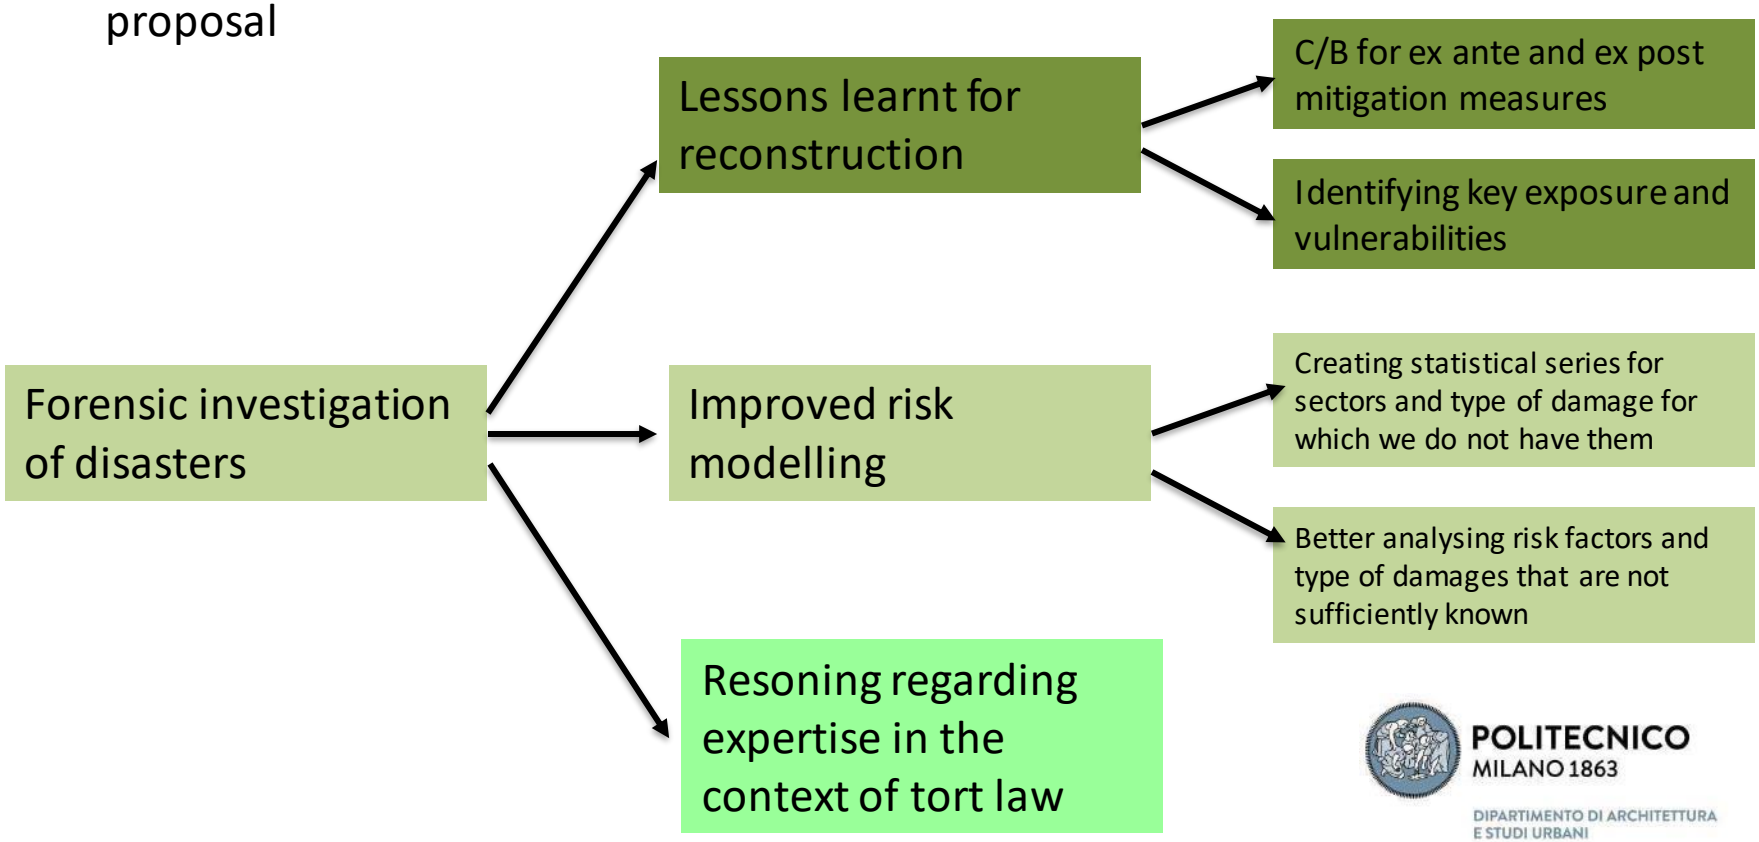


POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Case studies and applications

Use of the case studies **for forensic investigation**:

- Forin/Perc/Accidents to learn lessons for: improved recovery and reconstruction; knowledge acquired to improve risk modelling
- Forensic as such, many interesting new aspects so perhaps we can think about investigating more in depth one or two cases. This however is a proposal



POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Information System

On the basis of the work that has been conducted for Idea and the Catalunya Service we need to:

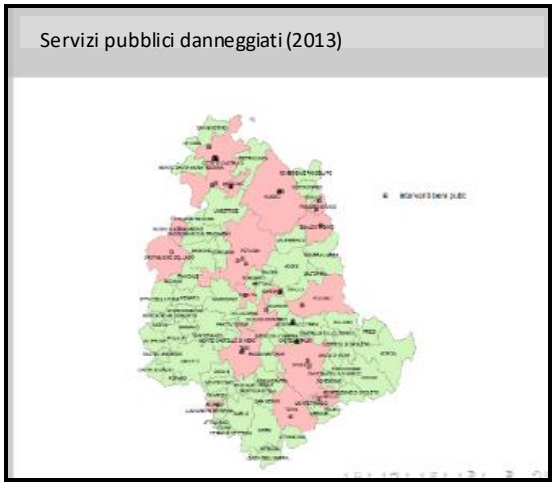
- Identify what are critical data to collect or coordinate for the sectors for which we have declared we need to do so: cultural heritage, lifelines (in particular power, water, gas), economic activities.
- Develop a full ER diagram for each sector and subsector using the collaboration with the stakeholders.
- Develop the databases and the interfaces. Design the system so that a unique access can be provided to all databases and modalities of retrieving information for different applications.
- Include in the system components for which we have already an ER: agricolture, residential and communication. Consider the possibility to include people and public facilities.

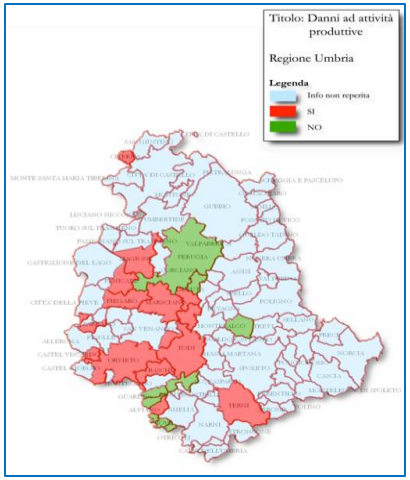
POLITECNICO
MILANO 1863
DIPARTIMENTO DI ARCHITETTURA
E STUDI URBANI

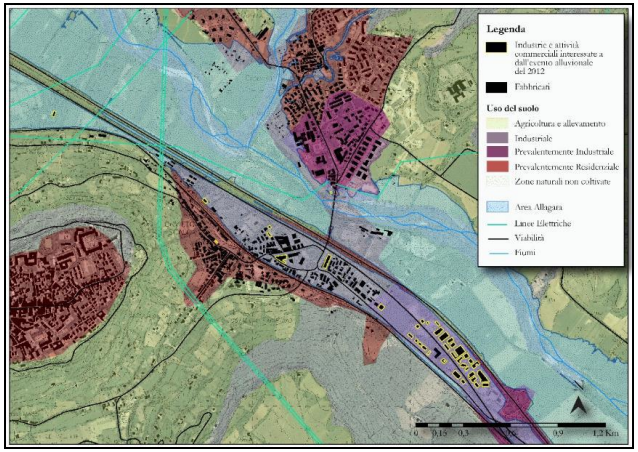
Information System

It is important to understand the interface between the databases and the geospatial representation of:

- Individual data
- Results of queries that do not require further merging and integration with other data (for various applications to be done manually)





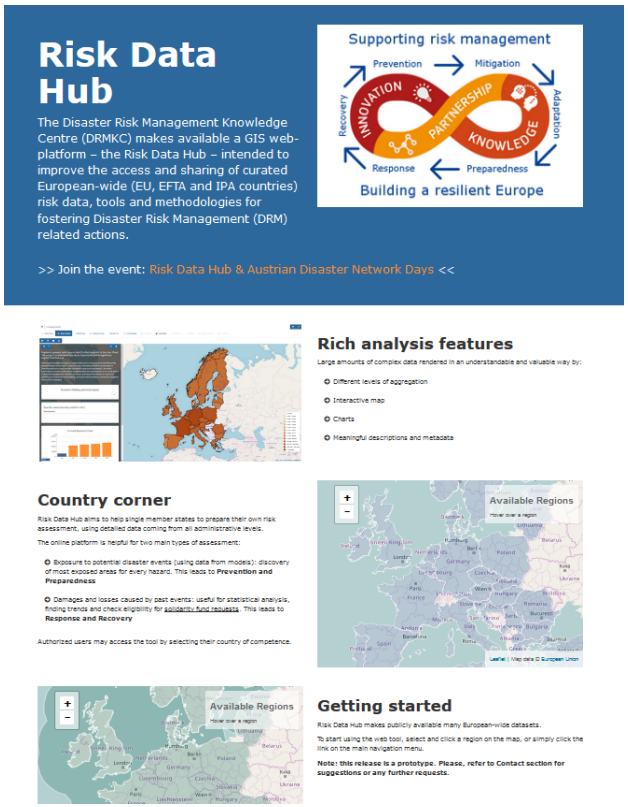


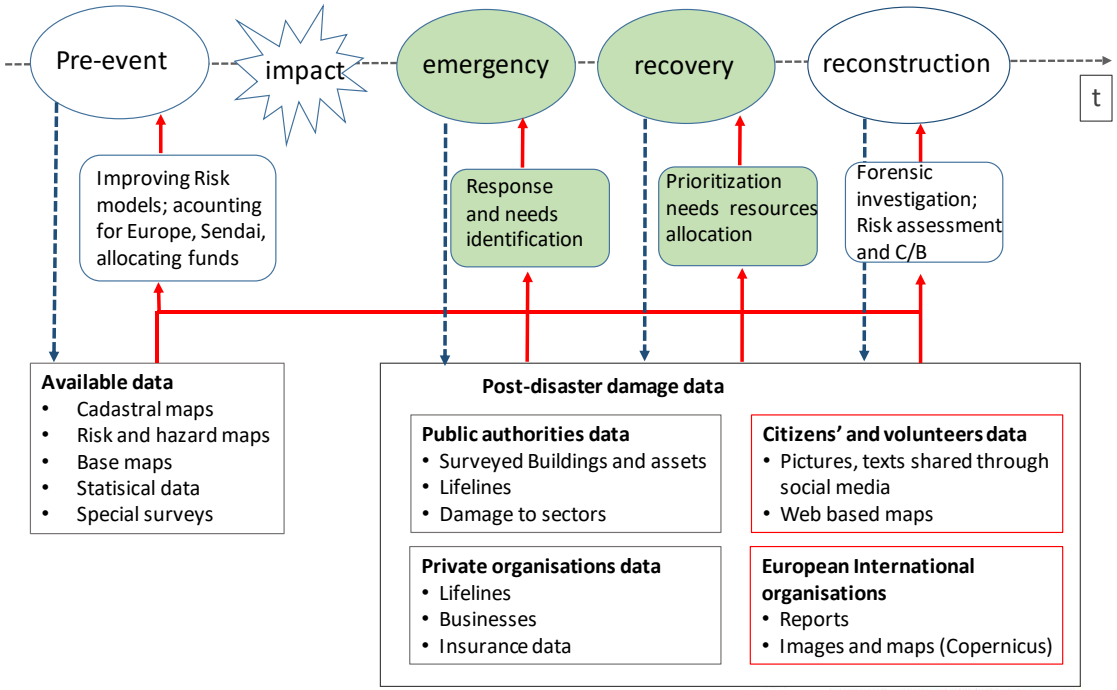
POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI

Information System

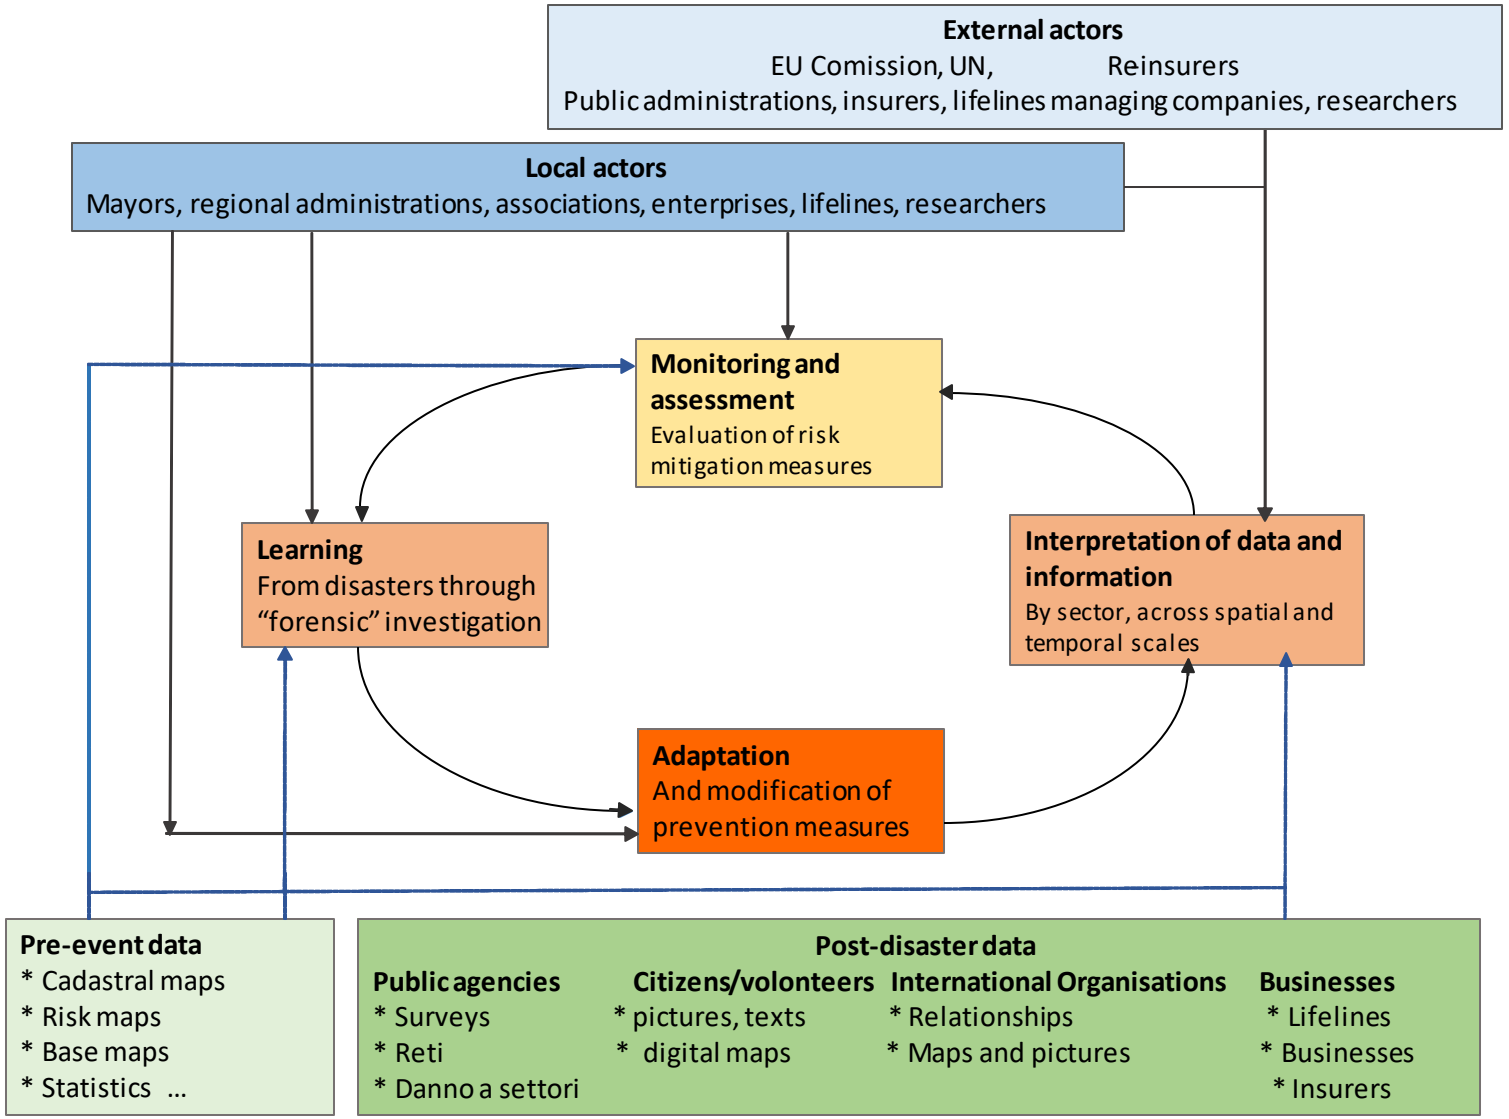
We need also to connect with the Risk Data Hub of the JRC considering that:

- Probably the Risk Data Hub covers more the pre-event risk assessment
- Understand if and how our database can be embedded inthe Risk Data Hub





The Lode iterative approach



POLITECNICO MILANO 1863
DIPARTIMENTO DI ARCHITETTURA E STUDI URBANI
